

Assignment 3

Ashutosh Kumar & Neeraj Chowdary Mamillapalli

1. Provide a link to GitHub repository for TAs to view the code. Code should include unit tests.(5 points)

<https://github.com/NeerajChowdary02/Software-design-project.git>

2. List what backend technologies you are using and why? (2 points)

We used Flask along with Python for the backend. Flask is an easy to use module to create apps and works wonderfully well with Python, hence, Flask was chosen.

Fill in this table, provide as much details possible:

Group Member Name	What is your contribution?	Discussion Notes
Ashutosh Kumar	Implement Flask with Python for the backend. Set up the app and various functions for the various pages of the webapp. Wrote unit tests for the backend.	Flask is a module used to implement the backend to an app in Python.
Neeraj Chowdary Mamillapalli	Helped write the code for the backend and helped assist in setting up flask and the required functions for it. Helped debugging/fix the unit test	Implementing flask greatly helps in having a good backend for a python app
