

Assignment 2

Ashutosh Kumar & Neeraj Chowdary Mamillapalli

1. Provide a link to GitHub repository for TAs to view the code? (1 point)

<https://github.com/NeerajChowdary02/Software-design-project.git>

2. Discuss if your design and development methodology has changed since assignment 1 and why? (1 point)

Our design and development methodology has not changed for now since the front end work was simple to anticipate.

3. List what front end technologies you are using and why. List who is responsible for doing what in your group? (2 points)

For the front end, we used HTML along with CSS. HTML is being used to place the data onto the web page and CSS is used to make the web page more appealing to the user by adding various layouts, designs, all of which make the webpage more appealing to a user.

4. Provide screenshots of your front end, each page? (5 points)

Fuel Quote History

Group Member Name	What is your contribution?	Discussion Notes
Ashutosh Kumar	Designed and wrote HTML/CSS script for the various pages.	The front end is straightforward—we just need to use HTML and CSS. There should be a background image

		that fits the company that we are designing this website for.
Neeraj Chowdary Mamillapalli	Worked on the HTML and CSS code for the pages	HTML and CSS to design the front end, and the ideal positioning of the logo on the webpage along with where the positioning of the login and fuel quote credential form should be placed and the various coloring/styling options for it.
